File: USPT

Dec 17, 2002

DOCUMENT-IDENTIFIER: US 6495604 B1

TITLE: Cycloalkene derivatives, process for producing the same, and use

Brief Summary Text (5):

cNOS occurs in the vascular endothelial cells and neurons, and is calcium calmodulin dependent and activated by various receptor stimulations to produce a small amount of NO, whereby being considered to contribute to the physiological regulatory effects described above. On the other hand, iNOS is induced in macrophages and a neutrophile by various cytokines and bacterial lipopolysaccharides (LPS) to produce a large amount of NO continuously, which makes it to be believed to have not only the pharmacological effects described above but also cell- and tissue-damaging effects at the site of the production [Immunol. Today, Vol.13, p.157-160 (1992)]. Cells known to express iNOS other than those described above may, for example, be hepatocytes, Kupffer cells, glia cells, vascular smooth muscle cells, vascular endothelial cells, myoendocardium, myocardial cells, mesangial cells, chondrocytes, synovial cells, pancreatic .beta. cells, osteoclasts and the like [FASEB J., Vol.6, p.3051-3064 (1992), Arch. Surg., Vol.128, p.396-401 (1993), J. Biol. Chem., Vol.44, p.27580-27588 (1994), J. Cell. Biochem., Vol.57, p.399-408 (1995)], and NO produced in these cells and tissues is known to be involved in various diseases and pathologies. Accordingly, a substance which inhibits the NO production by iNOS inducible cells is considered to be effective as a prophylactic and therapeutic agent against various diseases such as arteriosclerosis, myocarditis, cardiomyopathy, cerebral ischemic failure, Alzheimer's disease, multiple sclerosis, septic shock, chronic rheumatoid arthritis, osteoarthritis, gastric ulcer, duodenal ulcer, ulcerative colitis, diabetes, glomerular nephritis, osteoporosis, pneumonia, hepatitis, psoriasis, graft rejection and pain. From this point of view, several iNOS-inhibiting compounds such as L-arginine analogue [Pharmacol. Rev. Vol.43, p.109-142 (1991)], aminoguanidine [Br. J. Pharmacol., Vol.110, p.963-968 (1993)] and S-ethylisothiurea [J.Biol.Chem., Vol.43, 26669-26676 (1994)] have been reported so far. However, each of these compounds is not satisfactory in terms of it's activity, and has a problematically undesirable inhibitory effect not only on iNOS but also on cNOS which is physiologically active.
